

Git Kata 2

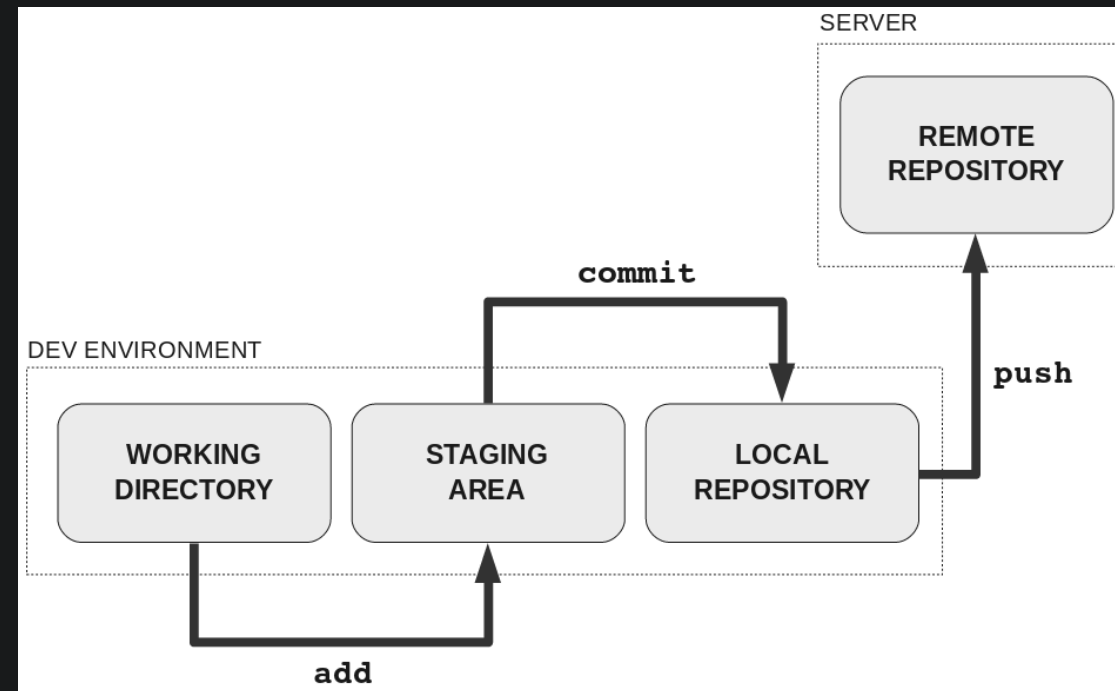

Add, Commit, Push

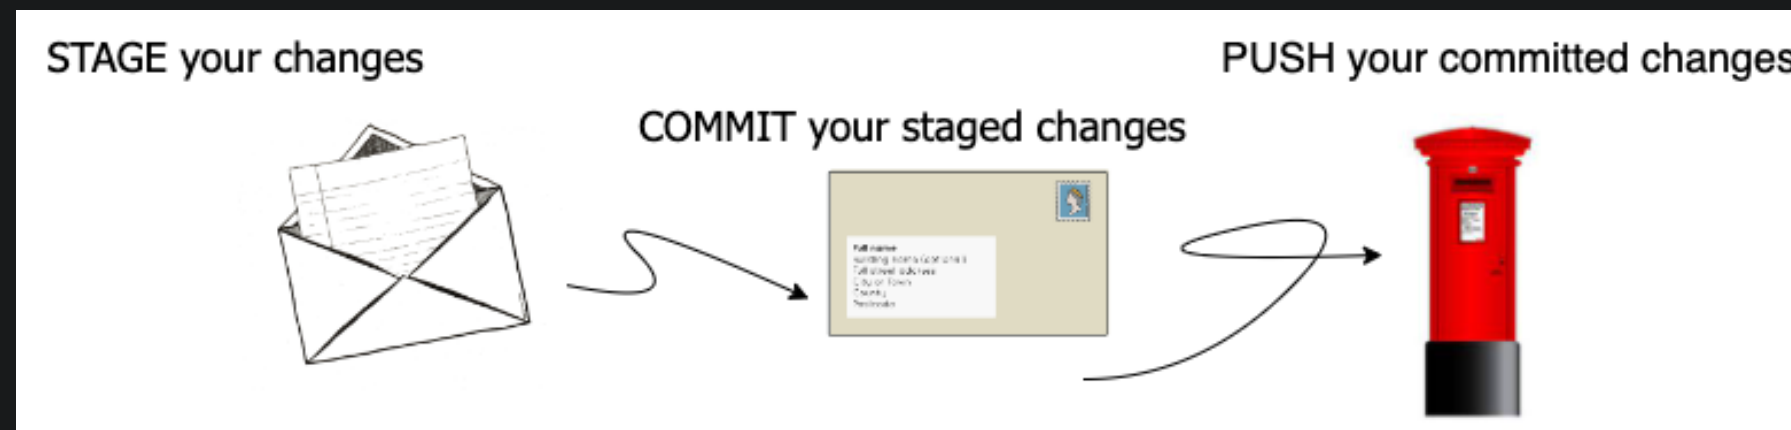

Add, Commit, Push

In today's kata you will practice pushing your work to the remote repository.

Add, Commit & Push

Add, Commit & Push

Exercise

You should already have your mini-project repository set up on GitHub.

- In your terminal, navigate to your mini-project directory.
- Add your changes to your local repository using `git add file.js` `file2.js` or just `git add ..`
- Commit your staged changes locally: `git commit -m "<your_message>"`.
- Use `git push` to push your changes to the remote repository.
